GAMER Game Beta Review

Call of Duty Black OPS 6 Beta Review on the Xbox Series S|X - PS5 |

One Weapon is Dominating Call of Duty: Black Ops 6's Beta is the Jackal PDW with the gun's long range, as it mimics marksman rifles despite being an SMG.

I'm pretty sure the Jackal PDW will be nerfed when the game is fully released.

Call of Duty: Black Ops 6 fans have been loving extremely overpowered Jackal PDW weapon in the game's closed beta weekend.

The Jackal PDW is one of the most powerful guns in Call of Duty: Black Ops 6 by far. Players noted that the gun is quite powerful not only because it has minimal recoil, but also due to its extremely long range.

This makes it extremely difficult to counter, as the time to kill has been reduced in Call of Duty Black Ops 6 as well.

The game's Shooting feels incredibly tight, Every weapon type, from assault rifles and SMGs to sniper rifles and shotguns, feels pretty good.

When it comes to maps, we've had four to mess around with during the beta's opening weekend Derelict, Rewind, Scud and Skyline.

Derelict with its long-range sight-lines and appealing, overgrown aesthetic was the most fun to play.

The other maps Rewind, Scud and Skyline felt pretty generic but were pretty solid and still fun to play.

So the merging of Black Ops and Modern Warfare game play feels fantastic, and the speed of game-play is extremely fast.

I'm having a ton of fun with the beta so far and looking forward to full release of the game.

Kill Order is a mode new in Black Ops 6 that finds a way to twist the core Team Death Match formula to make it less chaotic.

At its core, Kill Order is Team Death Match with a twist.

I fell in love with Kill Order.

Out of all the game modes I found that Kill order was the most fun to play.

The basics will be familiar as two teams of six compete to get the most kills, earn points, and win a match.

To help focus the action, one player on each team is named the High Value Target.

Your team must protect your high value target while try to eliminate the enemies high value target.

I found the beta performance on xbox series x to be the best gaming experience for the black ops 6 beta, followed by the PlayStation 5 and then the Xbox series s.
